

DOCUMENT MANAGEMENT / WORKFLOWS

SymaDoc

Documents understood. Work routed.

AI reads incoming correspondence, classifies documents and proposes the next step. People keep oversight as the work moves through the organisation.

PRODUCTION PILOT

In a private-sector production pilot since August 2026. AI can run on the client's server.

01 Intelligent document intake

Email, portal submissions and scans enter one workflow. AI proposes the document type, case, recipient and handover note.

02 Answers with source citations

Search the archive, summarise cases and draft responses. Answers use only documents the user is permitted to access, with exact source citations.

03 Local AI with human oversight

Local OCR and AI support deployment on your server. Users confirm proposed actions, with permissions and an audit trail. Automation can expand after measured human review.

HOW IT WORKS**01** Receive & read**02** Classify & propose**03** Review & confirm**04** Route & notify

Bring a document workflow to life.

Explore a demonstration with your documents, on your server. Discuss a pilot or implementation partnership.
